SEQUENCE OF 19-573 FROM N.A.

STRAIN-CV. DESIREE: TISSUE-LEAF;

A HIDMINE TO BE SERVER TISSUE-LEAF;

HIDMINE TO BE SERVER TISSUE-LEAF;

WILLIME 1905 OF dascaigle and jasmonic acids in gene activation as a recurst of mechanical wounding.

TESUIT of MATTER TISO (1992).

FINCTION: PRESCHABLE INVOLVED IN THE PROCESSING AND REGULAR TISONOVER OF INTRACELLULAR PROTEINS.

CHANKOVER OF INTRACELLULAR AMINO ACIDS.

TISSUE SPECIFICITY: IN TUBERS AND FLORAL BUDS OF UNTRAIED PLANTS.

CHANKOVER OF RESIDENT OF MECHANICAL WOUNDING IS MOSTLY ACCUMULATED.

AFFER ABA TREATMENT OF MECHANICAL WOUNDING IS MOSTLY ACCUMULATED.

CHANKOVER OF A LESSER EXTERN IN STEMS, BUT NOT IN ROOTS.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Variance 127, 35; scale 0.233 Mean 29.704; Statistics Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Claim b) Page 11. 58pp. Japanese.

The present sequence represents a multi-epitope peptide which is used as a new immunoting agent. It comprises T cell epitope regions from 2 or more different allurgens (preternally linked via arginine or lysine dimers), where the T cell epitope regions: have a positivity index greater than 100 as measured in a patient group responding to the allerden; have at least 70% reactivity with lymphocyces from patients responding to the allergen; and are not reactive with immunoglobulin E (195) antibodies from patients responsive to the allergen. The agent can be used to prevent and treat a wide variety of allergic diseases, e.g. by desensitisation. Side effects, e.g. those mediated by 19E, are reduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 MKVIVAFINUFGPNRRVFIKRVSNVIJHGRRIGIFASKNFHLUKNTIGIGKRWKNNRIWLQ 60

Useful for irrealment and diagnosis of cedar pollen allergy claim 5. Page 55-28: 41pp; English.

The spice enroding an allergen of Japanese cedar pollen was isolated by PPS amplification using primers bused on portions of the allergen protect. The gene was used for recombinant allergen production in Sequence 54. AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Washin codar pollon allergen Cry ) II epitope - comprises at least part of specified 46s amico acid protein claim; Pasa 10-11: ITPP: Japanese. (laim; Pasa 10-11: ITPP: Japanese. (BSS94 is a Japan cedar pollon Cry ) II allergen which is useful in the diagnosts, prevention and treatment of Susi pollicests. The diagnosts, prevention and treatment of Susi pollicests. the diagnosts reaction to Japan cedar pollen. Significant regions of the dilargen were identified using overlapping peptides of the full epitope derived from a Cry 3 if antigon-specific I cell line (see F77871-897960). Amico acids 66-80 (R97884) and 186-200 (R97898)

```
Q84C45 encodes R69792 Japunioum allergen, from which the unitalistics peptides R69845 R69859 were ferracd. The peptides ability to inhitity to richitist the cross-liking of an all age, to an IJE antibody can be said in the prevention and treatment of allergic diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 HIDS K, Salto S. Tanguchi Y.
WPT: 96-140976/15
New Eptide(s) derived from the allergen-specific 1qE antituaty allergen-specific T-cells, but not allergen-specific 1qE antituative derived for treating cedir pollinosis
Claim 5: Reage 29-97, 3Epp, English.
Synthetic peptides based on portions of cedar pollen allergens A (R81586) and B (R81587) were tested for their ability to activate cedar allergen-specific 1st
                                                                                                                                                                                                                                                                                                                                                                                                               ۶.

untibodies t Puppidos (R81580-R81585) were identified as Thoell epitogos. These peptidos, plus subsequences (R81575-79) essential for Threil recognition, and homologous poptidos (R81589-96) can be actual menostherapeutic agents to treat or prevent celar politicosis, unouding side-effects such as aniaphylaxis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     7-ce. epitope peptide portion of Japanese cypress pollen antidens

New peptide(S) derived trom codar polled aliengens - activate
state for treating codar pollinosis
claim S: Page Biglist pollinosis
Synthetic peptides based on portions of cedar polled aliengenspecific library to activate
CRB1586) and B (RB1587) were tested for their ability to activate
codar allegen-specific library was been inclaimed as properly and nomologists peptides (RB1585) were identified as firely
contropes. These peptides, page 8081565) were identified as firely
contropes. These peptides (RB1585) were identified as firely
contropes as immorther agents to treat or prevent redar
collinosis, avoiding side-viter's s.m. as anaphylaxis
present invention describes peptides which correspond to the 1000. Lope sites on Japanese eppress police antidens that and the training
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                75
                                                                                                                                                                                                                                                                                                   7.
                     epitope sites on Jaganese operess pollen antidens chall and that peptides can be used as a readent for the clasmosis of almostration operation of spring tree pollon disease in which the period involves reactivity to Japanese oppress pollen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          12-MAR-1996 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                24-MAR.1998 (first entry)
Multi-epitope peptide used as immunotherapeutic agent *[,
Multi-epitope peptide; immun therapeutic agent; allergin disease;
Theil epitope region; aller en; lymphocyte; immunoglobilin E.
                                                     24-MAR-1998 (first entry)
Militepinope peptide used as immunotherapeutic adent **.
Mailth epitope peptide immunotherapeutic adent, allergic discussor.
Theel epitope regions alleraens lymphocytes immunoaletils E.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Dairiki K. Iwama A, Kino K, Kume A, Sone T:
WPI: 97-4070495/43.
WPDide immuno:therapeutic agent to treat allergic discases -
contains multi-epitope peptide containing T cell epitope regions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Somme 806, DB 1, Length 105;

The present sequence represents a multi-epitope peptide which is used as mew immunity agent. It comprises T cell epitope requents from 2 or more different allergens. It comprises T cell epitope requent during the T cell epitope regions; have a positivity index attender than 100 us measured in a patient group responding to the allergen; and patient group responding to the allergen; and are not reactive with immunoglobulin E responding to the allergen; and are not reactive with immunoglobulin E (get) antibodies from patients responsive to the allergen. The agent can be used to provent and treat a wide variety of allergic diseases, e.g. by desensitisation, side effects, e.g. those mediated by 192, are reduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A THAIR INTERCRETARY SERVE SO NAVAKU.

Japanese cypress polien antigen Chao2.
Japanese cypress pollen, antigen, T-cell epitope: Chao1: Chao2.
diagnosis: allergy: spring tree pollen disease: pollinosis.
Chamaeyparis obtusa.
W909747648 A1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New peptide(s) derived from codar pollen allergens - activate allergeneinspecific TaE antitudies. Used for treating cedar pollinosis allergen-specific TaE antitudies. Disclosure: Page 32: 36pp: English.
                                                                                                                                                                                                                                                                                                                                                  Cars
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Synthetic peptides based on portions of cedar poilon alterands A (R8188) and B (R81887) were tested for their ability to activate cedar allergen-specific I-cells, but not alterancespecific [36] antibodies as Peptides (R8188-R8189) were identified as India epitopes. These peptides (R8188-R8189) were identified as India epitopes. These peptides (R8187-R9189) essential for I-cell reconfillion, and namelogies (R8187-R99) essential that contain I common ambinately as sestimated to I more ambina and a sistimately and be used. As a namenotherage cities such as anaphylaxis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MR1588 standard; Peptide; 17 A...

The present sequence represents a Thosi epitope peptide from Japanese eypress policy antigen Chao2. The present invention describes peptides eypress policy antigen Chao2. The peptides eites on Lapanese eyptides antithems chao; and chao2. The peptides can be used as a reagent for the diabrosis of allergy to Japanese eypress pollen, and as an antigen in the treatment and prevention of spring tree policy disease in which the policies involves reactivity to Japanese eypress policy.
                                                                                                                                                                                                                                                                                                                                                                        <u>.</u>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1: Fig 13: 137pp: English.

The sequence is that of an isolated peptide of the Japanese bodar poller alleraem Gry 1: (amino ucids 81-100). The peptide, 001-9, can be used for the irotiment and disabosis of alleraes associated but he Japanese bedar poller. It has enhanced therapeutic proporties but reduced side effects compared to naturally occurring allergens. Sequence 20 AA:

The peptide, CJI-41, can be used for the treatment and diagnosis of allergies associated with Japanese cedar pollen. It has enhanced therapeutic properties ut reduced side effects compared to naturally occurring allergens.

Fig. 3. Type Japanes.

Scharme 5. Fig. 3. Type Japanes.

R9787-R97860 are overlapping periodes used for the epitope multiple of the Japan cedar police allerate fry 5.11. Cry 3.11 and allerate to five peptides of it are useful in the diagnosts, prevention and hierarchic of Sugisficant regions of the allerate fractions of Japan cedar politics.

Significant regions of the allerate were identified using the corresponding peptides of the full epitope derived from a fig. 3. Its configurations regentle from a fig. 3. Its configurations research from a fig. 3. Its configurations of the 90 peptides rested.

Sequence 15 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ن
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sars
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         R81582 standard; Peptide: 17 AA.
R81582:
24-MAY-1996 (first entry)
Cedar pollen allergen peptide 10 (T-ceil epitope).
Cedar: Cryptomeria japonica: pollen; allergen; immunoglobulin E;
Cedar: Cryptomeria japonica: pollen; allergen; immunotherapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sugi allergen protein Cryj2 / lived epitupe for 1 cells.
T cell epitope, sudi allergen proteins Cryj1; Cryj2; treatmen:
sugi-pollinosis; allergic reaction; pollen.

Peptide imminoriberapeutic agent to treat allergic diseases -
contains multi-epitope peptide occiaining T cell epitope regions.

I from different allerges.

Claim 6: Page 11: Septemble and the principe regions of the present sequence represents a multi-epitope peptide which is used as a new immunoriberapeutic acont. It comprises T cell opitope regions from 2 or more different allerges (preferably linked via arginine or lysine or more different allerges (preferably linked via arginine or lysine or more different have the T cell epitope regions; have a positivity index or allerges allerges and are not reactive with immunosity index inespending to the allerges and are not reactive with immunosity thin E (195) authordies from patients responding to the used to the allerges and are not reactive with immunosity cline deep to be used to prevent and ireat a wide variety of alterial diseases, e.g. by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a multi-epitope populde which is used as a new immunocherapeutic agent. It comprises I cell epitope regions from 2 or more different allegents. It comprises I cell epitope regions from 2 dimers) where the I cell epitope regions; have a positivity index agreater than 10 as measured in a patient group responding to the different and are not reactively with immunoglobulin E responding to the allegent and are not reactive with immunoglobulin E (4E) difficultionals from the allegent and are not reactive with immunoglobulin E in used to the allegent a wide variety of allegent The agent can be used to prevent and freat a wide variety of allegent The agent can be used to prevent and freat a wide variety of alleged are reduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 MKVIVAFNJETOPNRRVETKRVSNVIIHORRIDIFASKNFHLQKNIIOTSRRWKNNRIWLQ 60

Sugi (Japanese cedar) pollen antique Cryji - is useful to: diagnosis, treatrent and prevention of sugi politiquisis. Claim 2: Page 5-7: fpp: Japanese.
The coding sequence for the Japanese cedar ("Sugi") politum alterion Cryji was isolated from a cDNA library prepared from polyn mish. All our part of the Cryji preten can be used for diagnosis, treatment and prevention of Sugi politicis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antigens derived from Japanese codar pollen allergen Gry \{\ :\ \cdot contain at least two I cell epitope(s), used to treat of diagnose
24-WAR-1995 (first entry)
Japanese cedar pollen antiden Gryji.

The sequence is that of the Japanese cedar pollen allergen.
Cry 1 which contains at least two T cell epitopes. Peptide antiques derived from it can be used for the treatment and diagnosis of allergies associated with Japanese cedar pollen. The peptides have enhanced therapeutic properties but reduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              73 RPLWIIFSGNWNIKLKMPMYIAGYKTFOGRRABVSYVHVNGA-KFIRRVOGII

for the diagnosis irrethment and prevention of allerance reactions for the diagnosis irrethment and prevention of allerance reactions.

Claim 11. Page 42: 69pp. English.

Fresh pollen and staminate cone samples were collected from a single Cryptomeria japonica (Japanese redar) tree. RNA was prepd, and used to synthesise conA. The cDNA subjected to successive rounds of PCR to yield a full leadth GTY ! I chone. GTY ! I or an antigen. I fragment of it may be used for detection, irreating and preventing an integring activative response to Japanese redar polien allerance. It is capable of modifying both the B and I cell response to a STY ; antigen.

                                                                                 New peptide(s) delived from redar police alleraens - activate alteraen specific T-colls, but not alleraen specific IgE antibodies. used for treating cedar polithosis.

Synthetic peptides Lased on portions of redar police alleraens A (R81586) and B (R81587), were tested for their ability to activate needer alleraen specific IGE antibodies. Further Specific IGE antibodies. Further antibodies at Toell epitones. These peptides, plus subsequences (R81583-79) essential for Treell recognition and homologous peptides (F81588-96) can be used as incontineration and homologous peptides (F81588-96) can pelices as incontineration agents to treat or prevent cedar pollinosis, uvoiding side-offects such as anaphylaxis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

T cell epitope peptide of seri poliber antigen - useful in the litetiment of sump polibrosa.
T cell epitope peptides W444 2-88 and their derivatives react with Gialm 1 Page 1: 14pp; Jagas, Se.
T cell epitope peptides W444 2-88 and their derivatives and/or time, prepared by combining at h 2 of the above peptides and/or their derivatives is used for to revention and treatment of sem polithosis. Sequence 30 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 3,
